## PROJECTS

**Peeky** | Rust, ONNX, cpal, Claude API | [getpeeky.ai](https://getpeeky.ai) | [GitHub](#)

- Built and shipped Peeky, a cross-platform voice-controlled AI assistant now serving **10 active users**, delivering **sub-2-second latency** from spoken command to on-screen action
- Cut command latency to **as low as 1.2s** by training a small on-device classifier that matches the Claude API at **92% accuracy**, routing locally to skip a **~1s** cloud HTTP call; backed by an eval harness and **50 tests** in CI
- Interviewed a user to pinpoint onboarding friction, then reworked the first-run flow to make setup faster and simpler

**Hindsight** | Python, pandas, OpenAI API, Claude API | [GitHub](#)

- Built a test harness that grades LLM forecasters only on data from after their training cutoff, so real skill can be told apart from the model just remembering what already happened
- Wrote the stats layer (walk-forward backtests, bootstrapped confidence intervals, permutation tests) and used it to show **gpt-4o-mini has no real trading edge**

**Timemachine** | Go, REST API, Wayback Machine, LLM synthesis | [GitHub](#)

- Built a research API in **Go** that answers any question as of a past date, removing the lookahead bias that invalidates historical LLM evaluations (the same data-leakage problem Hindsight measures, solved at the data layer)
- Enforces a hard cutoff at query time (drops any document newer than the as-of date), pulls sources from the Wayback Machine as they looked then, synthesizes one LLM answer, and caches immutably; shipped v1 with CI

## EXPERIENCE

**Cape Property Pros** | Python, PostgreSQL, OpenAI API, QuickBooks & Gmail APIs

June 2025 – Present

*Software Engineer (sole developer)*

Dennis, MA

- Saved **~10 hours/week** by building a Python GPT pipeline that extracts fields from **~250 invoices/month** at **95% accuracy**, validates against a Pydantic schema, and syncs to QuickBooks Online
- Unified Gmail and QuickBooks Online API data into one PostgreSQL store via async batch ETL, ending siloed manual lookups
- Cut error rate **15%** and removed **100+ duplicate records** with RapidFuzz fuzzy matching and hash-based deduplication

## VOLUNTEER

**CutePetsBoston** | Python, Instagram Graph API | Code for Boston

Dec 2025 – Present

- Shipped an automated Python pipeline that posts an adoptable dog twice daily via the Instagram Graph API, driving follower engagement; **500+ posts** delivered to date at **100% uptime**

## SKILLS

**Languages:** Python, Go, Rust, TypeScript, SQL

**AI/ML:** eval harnesses, fine-tuning (SetFit), ONNX / on-device inference, Claude API, OpenAI API, Claude Code

**Data:** pandas, NumPy, scikit-learn

**Backend & Infra:** FastAPI, REST APIs, PostgreSQL, asyncio, Docker, CI/CD

## EDUCATION

**University of Pennsylvania (Part-Time, Online)**

Admitted, Fall 2026

*Master of Applied Science in Computer Science, Artificial Intelligence concentration*

Philadelphia, PA

**The University of Chicago, Booth School of Business**

June 2025

*Master in Management, Data Analytics Concentration*

Chicago, IL

**Kenyon College**

May 2024

*Bachelor of Arts, Economics and Chinese Language and Literature; GPA: 3.5*

Gambier, OH

## ATHLETICS

**NCAA Division III Swimming** – Kenyon and UChicago

5x National Champion, 5x First-Team All-American, 3x Scholar All-American, US Open Qualifier
