EXPERIENCE

Cape Property Pros

June 2025 – Present

Software Engineer

Dennis, MA

- Saved **~10 hours/week** of manual data entry by deploying a Python GPT-based extraction pipeline that processes **~250 invoices/month**, pulling structured fields at **95% accuracy**, validating them against a Pydantic schema, and syncing them into QuickBooks Online
- Unified data from the Gmail and QuickBooks Online APIs into a single PostgreSQL store via async batch ETL, removing siloed manual lookups across sources
- Cut the error rate **15%** and removed **100+ duplicate records** by reconciling synced data with RapidFuzz fuzzy matching and hash-based deduplication

PROJECTS

Peeky | Rust, ONNX, cpal, Claude API | getpeeky.ai | [GitHub](#)

- Built and shipped Peeky, a voice-controlled AI assistant for macOS now serving **10 active users**, delivering **sub-2-second latency** from spoken command to on-screen action
- Cut command latency to **as low as 1.2s** by training a small on-device classifier that matches the Claude API at **92% accuracy**, routing locally to skip a **~1s** cloud HTTP call; backed by an eval harness and **50 tests** in CI

hindsight | Python, pandas, OpenAI API, Claude API | [GitHub](#)

- Built a test harness that grades LLM forecasters only on data from after their training cutoff, so real skill can be told apart from the model just remembering what already happened
- Wrote the stats layer (walk-forward backtests, bootstrapped confidence intervals, permutation tests) and used it to show **gpt-4o-mini has no real trading edge**

timemachine | Go, REST API, Wayback Machine, LLM synthesis | [GitHub](#)

- Built a research API in **Go** that answers a question as of a past date and keeps anything published after that date out of the answer
- Pulls the requested URLs from the Wayback Machine as they looked on that date, has an LLM write one answer, and caches it permanently since the past never changes; shipped v1 with CI

VOLUNTEER

CutePetsBoston | Python, Instagram Graph API | Code for Boston

Dec 2025 – Present

- Shipped an automated Python pipeline that posts an adoptable dog twice daily via the Instagram Graph API, driving follower engagement; **500+ posts** delivered to date at **100% uptime**

SKILLS

Languages: Python, Rust, TypeScript, Go, SQL, Bash

LLM/NLP: fine-tuning (SetFit), model distillation, eval harnesses, prompt engineering, Claude API, OpenAI API, embeddings, ONNX inference

ML/Data: scikit-learn, sentence-transformers, Pandas, NumPy, DVC, ETL pipelines

Infrastructure: FastAPI, REST APIs, streaming, asyncio, PostgreSQL, Docker

EDUCATION

University of Pennsylvania

Expected 2028

Master of Applied Science in Computer Science

Philadelphia, PA

The University of Chicago, Booth School of Business

June 2025

Master in Management, Data Analytics Concentration

Chicago, IL

Kenyon College

May 2024

Bachelor of Arts, Economics and Chinese Language and Literature; GPA: 3.5

Gambier, OH

ATHLETICS

NCAA Division III Swimming – Kenyon and UChicago

5x National Champion, 5x First-Team All-American, 3x Scholar All-American, US Open Qualifier
